

PARENT CHECKLIST · APRIL 2026

What parents should do in April

The simplest way to turn April into an advantage is to treat it as a month of clarity, not confusion.

1 Review recent contest experience calmly

- Do not overreact to scores
- Focus on how your child approached the problems

2 Track results, recognitions, and invitations

- Watch for Math Kangaroo, CEMC, and olympiad signals
- Use results as direction, not judgment

3 Focus only on relevant events

- Not every contest matters for every grade
- Avoid information overload

4 Build a simple daily math habit

- 10–15 minutes is enough
- Consistency matters more than intensity

5 Decide summer direction early

- Choose between foundation, speed, or competition prep
- Do not leave summer to chance

6 Do not delay competition preparation

- April is the right time to begin the next cycle
- Avoid starting late in fall

7 Protect your child's confidence

- Be mindful during the results period
- Focus on growth, not comparison

8 Increase positive math exposure

- Use Awareness Month activities
- Make math enjoyable and engaging
